Output

```
Inorder traversal:   20 30 40 50 60 70 80
Preorder traversal:  50 30 20 40 70 60 80
Postorder traversal: 20 40 30 60 80 70 50

Searching for 60: Found
Searching for 25: Not found

Inorder traversal visits left subtree, then root, then right subtree.
Since every left child is smaller and every right child is larger than
its parent in a BST, this ordering naturally produces sorted values.
```
